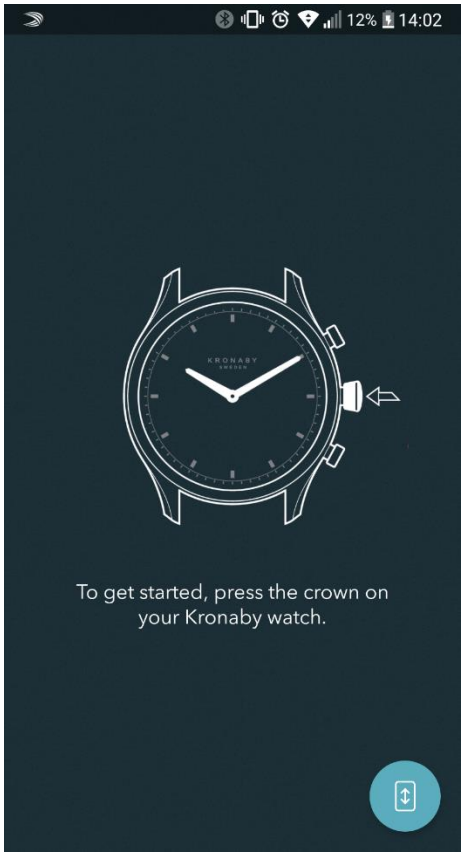
KRONABY APPLICATION USER GUIDE SPECIFICATION

HOW TO CONNECT THE WATCH

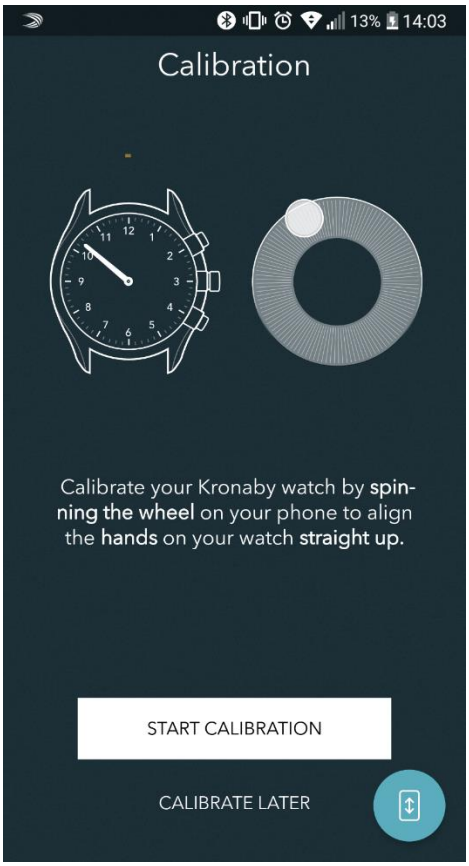
The watch cannot function without connection to a phone. The paper quick guide provided in the sales kit instructs the user to download the APP and follow the instructions there.

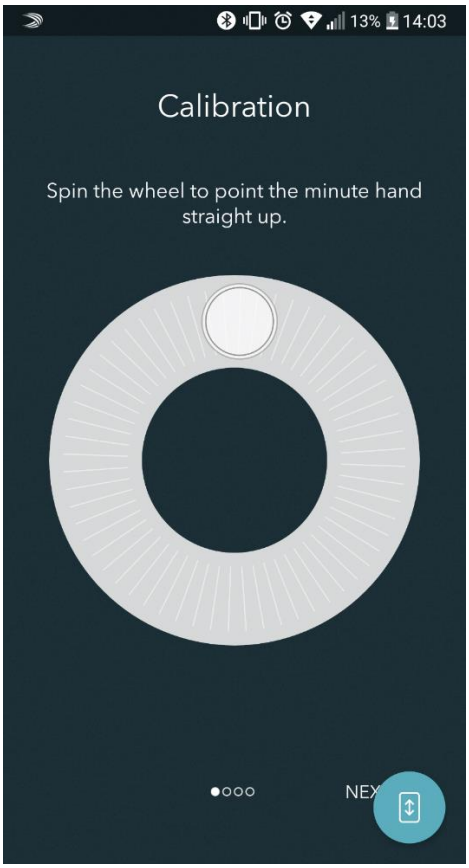
When starting the APP it will (if needed) prompt the user to change setting to allow the APP privileges and (if needed) turn on Bluetooth.

Then the user is then prompted to connect the watch by pressing the Crown on the watch.

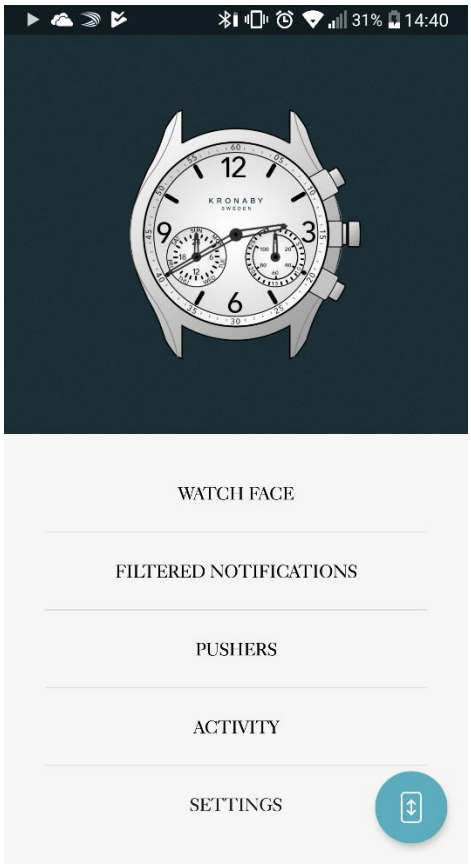


After the connection has finished (no user actions needed) the clock may need calibration which is explained using animation and dialogs.





After this initial setup the user is shown the main menu.



GENERAL USAGE

When the user chooses each feature the first time they will be shown an explanation of how to use it and what it does. Most of the dialogs shown in this specification is also animated to really show the user what they need to do and what will happen.

WATCH FACE FUNCTIONS
